About Us

GVS Filter Technology is a fully integrated producer and supplier of membrane-based solutions for the life sciences, environmental monitoring and process filtration markets. Our GVS membranes are used for laboratory research, food and beverage production, medical diagnostics, pharmaceutical research and bio-processing. All the membranes are manufactured at our facilities in North America and Italy, allowing for easy and cost-effective customization. GVS Filter Technology has the widest choise of membrane in the market, and thanks to expertise GVS is able to partner with you for all of your OEM Membrane needs.

Our History

Our roots go back to Schleicher and Schuell Bioscience (S&S), a German-based company with expertise in membrane-based products for life sciences, diagnostics and microbial monitoring. When S&S was acquired by Whatman LLC in 2006, its US operations were moved to a new facility in Sanford, Maine. The state-of-the-art research and manufacturing facility combined expertise in filtration and track etched membranes with the life sciences applications.
In 2011 the company became part of GVS Group and Life Science Membrane Center of Excellence.
Through organic growth and strategic acquisitions, the company, now branded as GVS Filter Technology, became a leading OEM supplier, contract manufacturer and finished goods producer of filtration, life sciences and environmental monitoring consumables.
We today manufacture many different type of membranes:

- Polyethersulfone (PES)
- Nylon (NY)
- Nitrocellulose (NC)
- Cellulose acetate (CA)
- Polyvinylidene difluoride (PVDF)
- Polycarbonate track etched (PCTE)
- Polyester track etched (PETE)

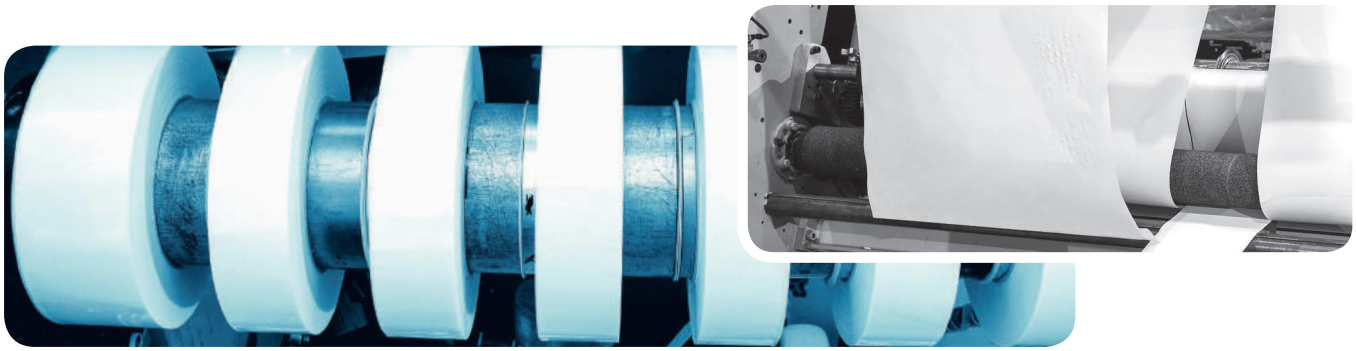
GVS FIlter Technology are recognized for quality and responsiveness to our customers. Our focus remains on providing a high level of excellence and service to successfully partner with you.

Our Facilities & Capabilities

GVS Filter Technology operates in a 24,000 ft^2 state of the art manufacturing facility in Sanford, ME and a 20,000 ft^2 membrane casting facility in Westborough, MA and 20,000 ft^2 membrane casting facilities in Bologna, Italy.

- The Massachusetts facility includes four membrane casting lines for PES, PVDF, NC and NY.
- The Maine facility includes several track etched membrane production lines for both PCTE and PETE and a membrane casting line for CA.
- The Maine facility includes nearly 20,000 ft^2 of clean room for manufacturing space and 4,000 ft^2 of R&D laboratories.
- The Bologna facility includes PVDF casting line, surface coating treating line, conversion capabilities, clean room and R&D laboratories.
- Our membrane conversion capabilities, including both razor slitters and rotary shears, provide a broad range of standard and custom roll stock slit widths.

Our expertise and quality control ensure strict adherence to the tight tolerances and performance specifications required for your applications.



POLYMERIC & TRACK ETCHED MEMBRANES

Our Commitment

- **Performance** - GVS Filter Technology membranes have a long history of use in many applications. From development through continuous improvement and investment, we strive to offer membranes that exceed performance specifications.

- **Consistency** - The GVS Filter Technology Quality Management System ensures adherence to ISO guidelines, providing a quality product with every run, every time. Documentation and support are there to ensure you meet your regulatory and customer requirements. Our commitment to quality and consistency is evidenced by repeat business from many major life science customers.

- **Support** - A membrane research team comprised of Ph.D.s and engineers provides the expert technical assistance you need to choose the membrane type and dimension to suit your specific applications.

- **Product Range** - Our nine casting lines combined with the depth of our knowledge make us uniquely qualified in the field of membrane-based life science solutions.

- **Continued Process Improvement** - By applying principles of Quality and continuous improvement GVS makes use of advanced design technologies, methods of error prevention and control systems. These system are used throughout the manufacturing processes worldwide to reduce the percentage of products which do not comply with specifications and helps us reach our target of 100% defect free manufacturing.

- **Flexibility/customization** - Our in-house casting capabilities combined with our conversion facilities allow us to customize almost any offering.

- **Efficiency** - GVS Filter Technology is a nimble and efficient company with low overhead and administrative burdens. Our size and structure help us to control costs and provide you direct access to the decision-makers and technical experts.

Our Quality & Certifications

- GVS Filter Technology facilities are registered to the ISO 9001:2008 standard, and are TS 19649 compliants.
- Manufacturing clean rooms are rated to class 100,000 (ISO 5).
- GVS Filter Technology operates a Quality Management System that ensures lot-to-lot consistency, traceability and full accountability.
  - Each roll stock order comes with a Certificate of Analysis
- Most of our membranes have been tested for biocompatibility, toxicity, extractables and bacterial retention.

Our facilities have been audited by many of our major customers, and we welcome your visit and audit.

We're here for you at every step. Please feel free to contact us at any time for more information:

Polymeric Membrane Application Guide

Let GVS Filter Technology be your one-source supplier for all your roll stock filtration needs. As the global leader with the widest microporous membrane portfolio, we can consolidate your supplier list. Our staff of scientific professionals have experience in many different industries and can be of assistance no matter what your industrial, bioprocess, or laboratory application may call for.

Polymeric Hydrophilic Membrane

Membrane Type	Characteristics	Applications	Industries
CA	Hydrophilic, low non-specific binding, low adsorption, thermally stable, uniform pore structure	Protein or enzyme filtration, protein recovery, tissue culture media filtration, wine filtration, prefiltration of plasma fractions and vaccines	Laboratory-Filtration; Environmental-Beverage and Water Testing
PES	Hydrophilic, low protein binding, high throughput, asymmetric structure	Coarse particulate filtration (large pore), final filtration (small pore), biological sample prep, IV filters	Environmental-Beverage Testing; Laboratory-Filtration, Medical Infusion
PES Positively Charged	Hydrophilic, low protein binding, high throughput	IV filters, oncology drug administration, long term administration	Medical Infusion
Air Flow Stop PES	Hydrophilic air flow stop membrane	IV drip chambers	Medical Infusion
NY	Hydrophilic, internally supported, high surface area, high protein binding, low extractables, supported for strength for automated equipment handling	HPLC sample prep, clarify aqueous and organic solvents, alkaline solutions, beverage and pharma processing	Laboratory-Filtration, Analytical, Bioprocessing; Pharmaceutical; Environmental-Beverage Testing
NY Positively Charged Filtration Membrane	Higher binding capacity than NC, internally supported, can withstand multiple reprobings, hydrophilic endotoxin retention	Radiolabeled and non-radiolabeled detection systems, Northern and Southern blots (nucleic acids), Multiple reprobings, Alkaline transfers, DNA fingerprinting, UV crosslinking, IV filters	Laboratory-Molecular Biology and Diagnostics, Medical Infusion
NC	Hydrophilic, resistant to mild acids, hydrocarbons, formaldehyde and petroleum ethers, high protein binding	Gravimetric and clarifications with aqueous solutions; microbial capture and detection	Laboratory-Filtration; Environmental-Beverage and Water Testing
PVDF Hydrophilic	High Flow Rates, Low Extractables, Broad Chemical Compatibility, Very low protein binding	TC media, pharma, ingredients, HPLC	Pharma to medical

Polymeric Hydrophobic Membrane

Membrane Type	Characteristics	Applications	Industries
PVDF supported / pure Filtration Membrane	Naturally hydrophobic, pure, high sensitivity, low background, broad chemical compatibility	Protein detection via Western blotting, amino acid analysis, protein sequencing, GC sample prep	Laboratory-Molecular Biology and Diagnostics
PVDF Oleophobic / Emophobic	Naturally hydrophobic, in/post treatment super	Air/gas venting, transducer protector, suction-aspiration, medical device	Medical to pharma, Industrial, Food&beverage, Medical venting, Automotive

Track Etched Membrane Application Guide

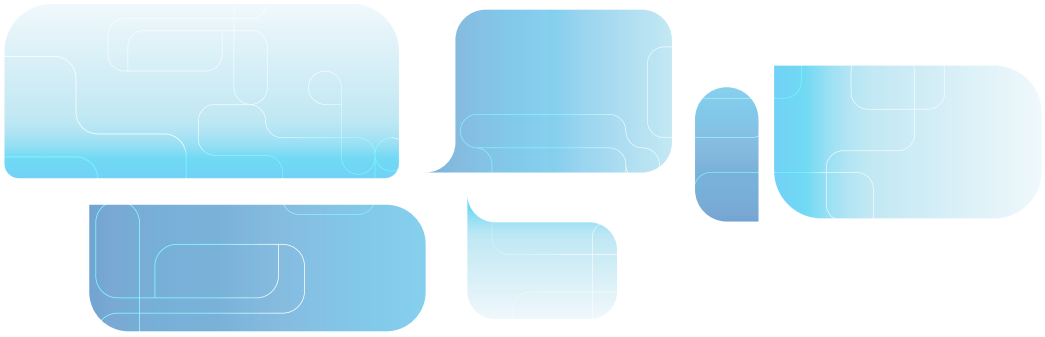
Description

Track Etched Membrane Hydrophilic

Membrane Type	Characteristics	Applications	Industries
PCTE	Hydrophilic, thin, smooth, low protein binding, non-reactive, tightly controlled pore size and air flow	Sterile filtration, DI water filtration, air monitoring, bacterial removal, liposomial extraction	Laboratory-Diagnostics, and Bioprocessing, Electronics Manufacturing, Industrial Hygiene, Medical device
PCTE-AOX	Hydrophilic, AOX-certified absorbable organic halogen-free	Groundwater, wastewater testing for organic halides	Environmental-Water Testing
PETE	Hydrophilic w/no wetting agent, smooth/flat surface, precise pore size, wide solvent and chemical resistance	Trace element and aerosol analysis, batch filtration of aggressive solutions, cell studies, RBC removal from plasma	Laboratory-Diagnostics and Bioprocessing

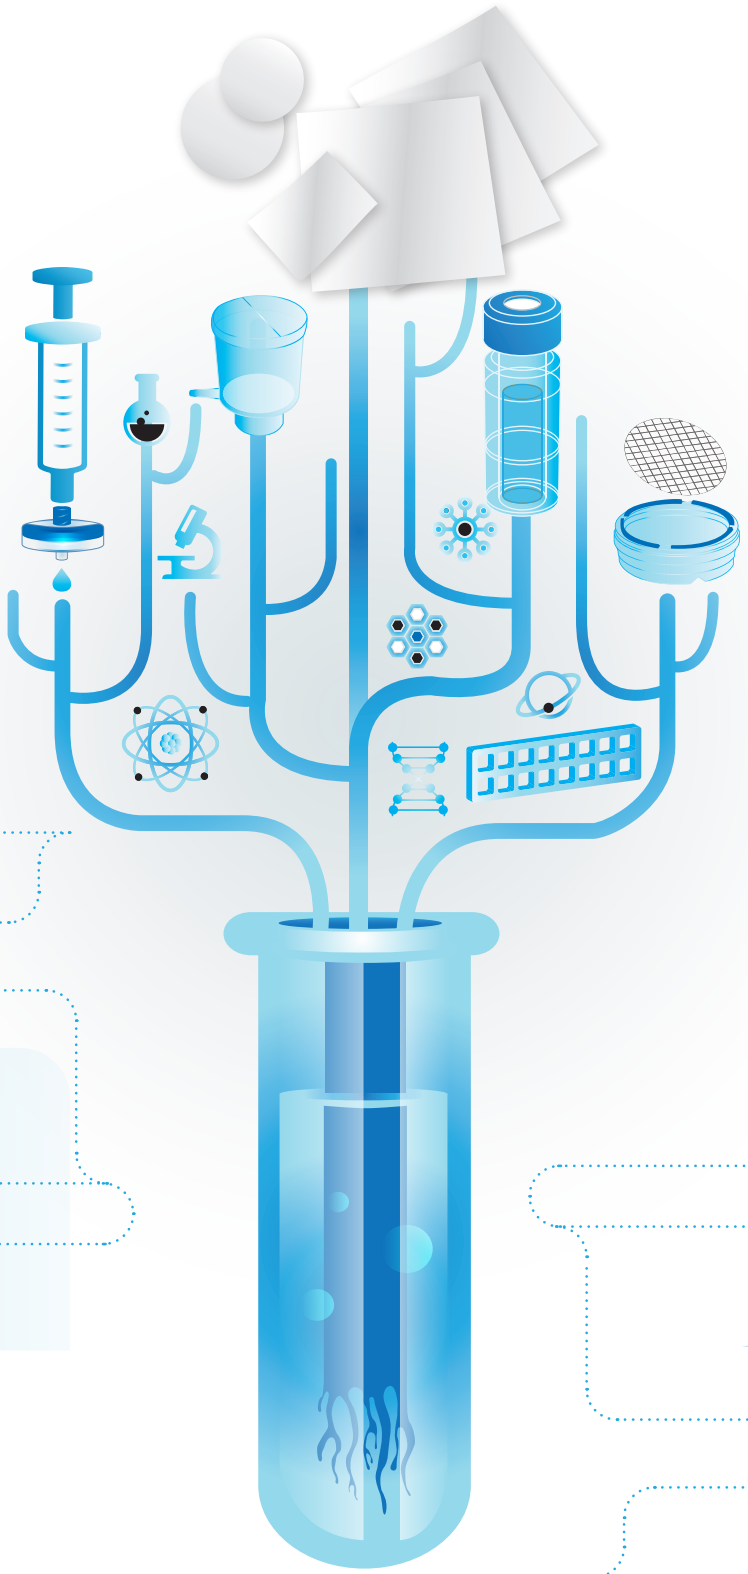
Track etched membrane Hydrophobic

Membrane Type	Characteristics	Applications	Industries
PCTE-PVPF	Hydrophobic, smooth surface allows for rapid cell migration, low extractables, lowest binding	Chemotaxis, cell culture, blood assays, cell growth venting applications	Laboratory-Diagnostics and Bioprocessing, Automotive, Medical device

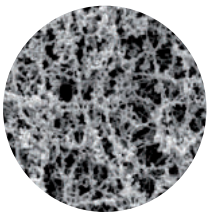


FILTER TECHNOLOGY

POLYMERIC HYDROPHILIC MEMBRANES



Polymeric Cellulose Acetate (CA) Filtration Membrane



GVS Filter Technology Cellulose Acetate (CA) Filtration Membrane is a supported, hydrophilic membrane that exhibits naturally low protein binding. Composed of cellulose acetate internally supported by an inert polyester web, resulting membrane has dimensional stability. This provides higher throughputs than competitor offerings and reduces the amount of filter changes needed during filtration of proteinaceous solutions. It is ideal for use in filtration applications where maximal recovery of protein is critical.

GVS Filter Technology CA Membrane is available in roll widths from 1 inch (2.54 cm) to 13 inches (33 cm), as well as in sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits

- Superior strength to withstand aggressive handling or use with automated equipment without breaking or tearing
- Low protein binding minimizes retention of proteins in solution
- Low extractables ensure tests will be clean with consistent results
- Lot-to-lot consistency ensures consistent flow and diffusion rates for dependable results every time
- Non-lysing of cells prevents contamination of critical solutions
- Passes USP Class VI Toxicity testing, ensuring suitability for use in medical devices
- The materials in this membrane are FDA approved for food contact under the applicable regulations in 21 CFR

Product Characteristics

- Hydrophilic
- Thermally stable with a maximum operating temperature of 274°F (135°C)
- Autoclavable
- Broad sealing compatibility, including ultrasonic, heat, radio frequency and insert molding

Typical Applications

- Protein and enzyme filtration
- Biological fluid sterilization
- Tissue culture media sterilization
- Cold sterilization
- Wine filtration
- Prefiltration of plasma fractions and vaccines

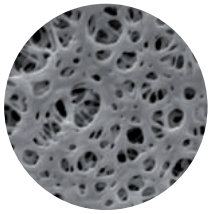
*** GVS Filter Technology Membrane is available in roll as well as in sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Polymeric Polyethersulfone (PES) Filtration Membrane



GVS Filter Technology Polyethersulfone (PES) Filtration Membrane is naturally hydrophilic, has low extractables and is cast from pure polyethersulfone polymer. This strong, microporous membrane is constructed from a high-temperature polyethersulfone polymer that is acid and base resistant. Its strength and durability are advantageous during usage that involves aggressive handling or automated equipment. It is designed to remove particulates during general filtration, and its low protein and drug binding characteristics make it ideally suited for use in life sciences applications.

GVS offers the Fast Flow PES Filtration Membrane. This membrane maintains the same low protein and drug binding characteristics as its low-flow counterparts, while exhibiting faster filtration performances.

GVS Filter Technology PES Filtration Membrane is available in roll widths from 1 inch (2.54 cm) to 31 inches (78.7 cm), as well as in cut sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits

- Low extractables ensure clean results
- Low drug and protein binding maximize sample recovery
- Superior burst strength protects integrity of membrane under high pressures
- Lot-to-lot consistency for reproducible results every time
- Endotoxin and USP Class VI test results ensure membrane is suitable for use in medical devices

Product Characteristics

- Hydrophilic
- Maximum operating temperature: 266°F (130°C)
- Autoclavable
- Broad sealing compatibility, including ultrasonic, heat, radio frequency and insert molding

Typical Applications

- Protein and enzyme filtration and sterilization
- Biological fluid filtration and sterilization
- Pharmaceutical sterilization
- Environmental water studies
- Coarse particulate filtration (large pore)
- Clarification and final filtration (small pore)

Air Flow Stop PES Membrane

GVS Filter Technology SAFE-IV membrane is an hydrophilic superior membrane able to stop air flow, for safer and more efficient performance.
This PES (Polyethersulfone) membrane, cast on a non-woven PET (Polyethylenethereftalate) support, has been formulated to satisfy the necessity of the use of a particle filter in IV administration sets (in compliance with ISO 8536-4) but with the additional performance of blocking automatically the air passing when the infusion container runs empty.
The fluids stay maintained in the infusion line.

SAFE-IV Air Flow Stop Membrane operates according to the principle that when wetted with fluid its surface becomes permeable to air starting from its bubble point, as a result, no air can enter into the infusion line after that the IV solution container runs empty.
Air Flow Stop PES Membrane is available in roll widths from 0.6 inch (0.15 cm) to 17.7 inches (45 cm), as well as in cut sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Product Characteristics
- Hydrophilic air flow stop membrane
- ISO 8536 - 4 Compliant

Typical Applications
- IV drip chambers

Features & Benefits
- Patient safety: prevention of air infusion and related infections
- Workload, time and costs reduction: absence of alarm and stressful situations; when the IV solution container is running empty, SAFE IV membrane keeps a constant fluid level and no air can get through the patient.
- High Flow Rate
- High through-put membrane allows minimum resistance to the flow rate.

Polymeric PES Positively Charged

GVS Filter technology positively charged PES membrane is the state of the art for endotoxine reduction in IV applications. The membrane guarantees high reduction log as well as high flow rate for the device.
Polymeric PES Positively Charged Membrane is available in roll widths from 0.6 inch (0.15 cm) to 17.7 inches (45 cm), as well as in cut sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Typical Applications

- IV filters
- Oncology drug administration
- Long term administration

Features & Benefits

- Long term drug administration reduce the need of IV set replacement and associated contamination risk

Product Characteristics

- Hydrophilic
- Improved Endotoxin Reduction
- High throughput

Efficiency Endotoxin Removal tester on 10 cm^2: @ flow rate 80 ml/h, endotoxin concentration 1 EU/ml, 120h (time filtration)	≥ 100%@72h ≥ 98%@96h ≥ 90% ®120h
LVR tested on 10 cm^2: @flow rate 200ml/min, endotoxin conentration 500EU/ml, 5min (time filtration)	≥ 4.0 log @ 3 min ≥ 3.5 log @ 4 min ≥ 3.0 log (@ 5 min

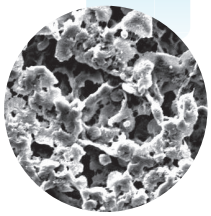
Polymeric Nylon (NY) Membrane



GVS Filter Technology Nylon (NY) Membrane is a supported, naturally hydrophilic membrane designed to wet out evenly and retain its superior strength during use in general filtration or medical assays. The membrane is internally supported with an inert polyester support web, giving it added dimensional strength and stability that prevents cracking, tearing, curling and breaking. This is advantageous during usage that involves aggressive handling or automated equipment. GVS Filter Technology NY Membrane is produced in filtration and hybridization grades to specifications optimized for those particular applications. GVS offers the Fast Flow Nylon Filtration Membrane. This membrane maintains the same strength and bacterial retention characteristics as its low-flow counterparts, while exhibiting faster filtration performance.
GVS Filter Technology NY Membrane is available in roll widths of 1 inch (2.54 cm) to 20 inches (50.8 cm), as well as in cut sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits

- Superior strength for easy handling
- Lot-to-lot consistency provides reproducible results every time
- Passes USP Class VI toxicity testing, for use in medical devices

Typical Applications

- Sterilization and clarification of aqueous, alkaline and organic solvent solutions
- HPLC sample preparation
- Beverage and pharma processing
- High nucleic acid binding capacity of 350-450 µg/cm² makes this membrane suitable for molecular biology applications and allows binding of a broad range of nucleic acid fragment sizes (75 bp - 50 kbp)
- Low extractables ensure clean results

Product Characteristics

- Hydrophilic
- Maximum operating temperature: 356°F (180°C)
- Autoclavable
- Broad sealing compatibility, including ultrasonic, heat, radio frequency and insert molding

NY Positively Charged Filtration Membrane

GVS Filter technology NY Membrane variation is an inherently charged nylon membrane, specifically designed to allow for numerous reprobings. The membrane is the state of the art for endotoxine reduction in IV applications. NY Positively Charged guarantees high reduction log as well as high flow rate for the device.
GVS Filter Technology NY Membrane is available in roll widths of 1 inch (2.54 cm) to 20 inches (50.8 cm), as well as in cut sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Typical Applications

- IV filters
- Oncology drug administration
- Long term administration
- Radiolabeled and non-radiolabeled detection systems
- Northern and Southern blots (nucleic acids)
- Multiple reprobings
- Alkaline transfers
- DNA fingerprinting
- UV crosslinking

Features & Benefits

- Long term drug administration reduce the need of IV set replacement and associated contamination risk

Product Characteristics

- Hydrophilic
- Improved Endotoxin Reduction
- High throughput

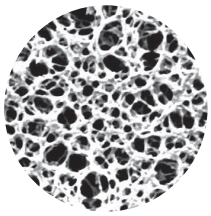
Polymeric Nitrocellulose (NC) Membrane



GVS Filter Technology Nitrocellulose (NC) Membrane is produced as an pure filtration membrane and as a supported or pure molecular transfer membrane for bio-analyses. Specifications for each type of NC membrane are optimized for its specific application.

NC membranes are naturally hydrophilic with a rapid flow rate and high throughput, which makes them ideal for use in diagnostic and filtration kit manufacturing applications. These membranes are composed of a mixture of inert cellulose nitrate and cellulose acetate polymers. For gravimetric analysis using ashing techniques, NC Membranes from GVS Filter Technology yielda residue of less than 0.045% of their initial weight.
For food and beverage and other microbiological applications, NC membranes are available with a black dye to increase optical contrast.
GVS Filter Technology NC Filtration Membrane is available in roll widths from 1 inch (2.54 cm) to 15.75 inches (40 cm), as well as in cut sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits

- High flow rate provides faster filtration
- Lot-to-lot consistency for reliable results every time
- Low extractables ensures clean results
- Passes USP Class VI toxicity testing for use in medical devices
- High protein binding makes this membrane suitable for molecular biology applications

Product Characteristics

- Hydrophilic
- Maximum operating temperature: 356°F (180°C)
- Autoclavable
- Broad sealing compatibility including ultrasonic, heat, radio frequency and insert molding

NC Filtration Membrane

Typical Applications

- Air monitoring
- Aqueous filtration
- Sterility testing
- Gravimetric analysis with ashing technique
- Microbiological and particulate analysis
- Cytology
- HPLC samples
- Food and beverage (black variation only)

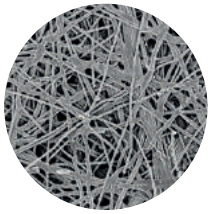
*** GVS Filter Technology Membrane is available in roll as well as in sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Polymeric Polyvinylydene (PVDF) Hydrophilic Supported Membrane



GVS Filter Technology Hydrophilic Polyvinylidene Difluoride (Hydrophilic PVDF) Filtration Membrane is a supported, hydrophilic membrane that exhibits broad chemical compatibility and low protein binding. Composed of PVDF internally supported by an inert polyester web, the resulting membrane has dimensional stability. This provides higher throughputs than competitor offerings and reduces the amount of filter changes needed during filtration. It is ideal for use in filtration applications of biological solutions. GVS Filter Technology Hydrophilic PVDF Membrane is available in roll widths from 1 inch (2.54 cm) to 12 inches (30.5 cm), as well as in sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits

- Superior strength to withstand aggressive handling or use with automated equipment without breaking or tearing
- Low protein binding minimizes retention of proteins in solution
- Low extractables ensure tests will be clean with consistent results
- Lot-to-lot consistency ensures consistent flow and diffusion rates for dependable results every time

Product Characteristics

- Hydrophilic
- Thermally stable with a maximum operating temperature of 274°F (135°C)
- Autoclavable
- Broad sealing compatibility, including ultrasonic, heat, radio frequency and insert molding

Typical Applications

- Sterilizing and clarifying filtration of biological solutions.
- Preparation of protein-containing solutions prior to chromatography or other instrument analyses.
- Useful for a wide range of applications, including aggressive and non-aggressive solvent-based mobile phase.
- Offers excellent chemical compatibility, even with aggressive acids and alcohols.
- Provides high flow rates and throughput, low extractables and broad chemical compatibility.
- Better protection of your analytical results.

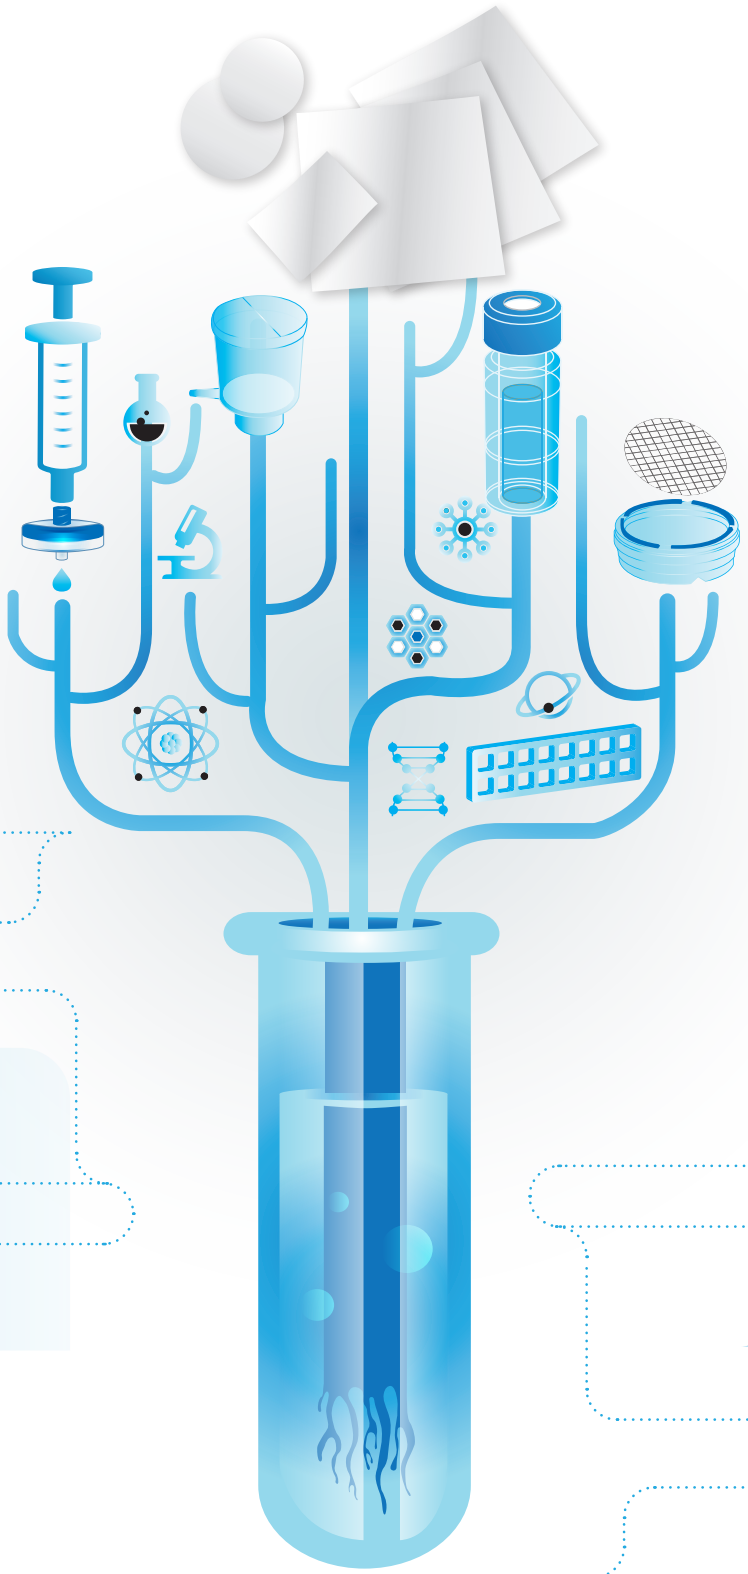
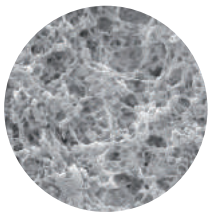
FILTER TECHNOLOGY

POLYMERIC HYDROPHOBIC MEMBRANES



Polymeric Polyvinylidene Difluoride (PVDF) Pure and Supported Membrane



GVS Filter Technology PVDF is a naturally hydrophobic membrane. GVS offers the widest range of this membrane: pure transfer PVDF membrane, supported transfer PVDF membrane and the supported oleophobic PVDF. Polyvinylidene Difluoride membrane has a high binding capacity and low backgrounds and is ideal for use in protein binding applications such as Western blots, solid phase assays and immunoblotting procedures. PVDF ensures reproducible results with maximum sensitivity. Proteins can be electroblotted from a variety of gel matrices. In addition, PVDF membrane will not degrade, distort or shrink when using a high concentration of methanol for destaining. The exceptional tensile strength allows for easy removal of target bands without concern for the membrane tearing, fracturing or curling.
GVS Filter Technology PVDF Transfer Membrane is available in roll widths from 1 inch (2.54 cm) to 11.81 inches (30 cm), as well as in sheets and cut disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits

- Broad chemical compatibility allows for the use of all commonly used stains
- Low backgrounds ensure the highest sensitivities across a broad range of molecular weights
- High sensitivity provides detection of low-level proteins
- High protein binding capacity (125 µg/cm² for immunoglobulins) allows capture of proteins across a broad range of concentrations
- Strong binding affinity prevents protein from passing through the membrane
- Strict quality control prevents signal variation across membrane lots
- Superior strength prevents distortion and breaking with aggressive handling and processing

Product Characteristics

- Hydrophobic
- Durable

Typical Applications

- Western blots (protein)
- Protein sequencing
- Amino acid analysis
- Dot / slot blots

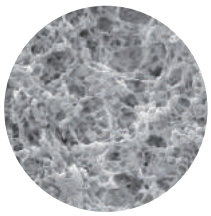
Polyvinylidene Difluoride (PVDF) Hydrophobic/Oleophobic/Emophobic membrane



GVS Filter Technology PVDF is a naturally hydrophobic membrane. GVS offers the widest range of this membrane: pure transfer PVDF membrane, supported transfer PVDF membrane and the supported oleophobic PVDF. This oleophobic membrane thanks GVS treatment has an enhanced oleophobicity and hydrophobicity, that make this membrane ideal for venting application as well as bloodlines applications. PVDF membrane will not degrade, distort or shrink when using a high concentration of methanol for destaining.
The exceptional tensile strength allows for easy removal of target bands without concern for the membrane tearing, fracturing or curling. GVS Filter Technology PVDF Olephobic Membrane is available in roll widths from 1 inch (2.54 cm) to 11.81 inches (30 cm), as well as in sheets and cut disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits

- Broad chemical compatibility allows for the use of all commonly used stains
- Strict quality control prevents signal variation across membrane lots
- Superior strength prevents distortion and breaking with aggressive handling and processing

Product Characteristics

- Hydrophobic/Oleophobic/Emophobic
- Durable
- Wide chemical compatibility
- Not wettable by most low surface tension liquids
- Execellence handling properties
- High mechanical strenght

Typical Applications

- Venting
- Spike vents
- IV filter vents
- Transducer protectors
- Vacuum suction canisters
- Urine drain bags
- Ostomy bags

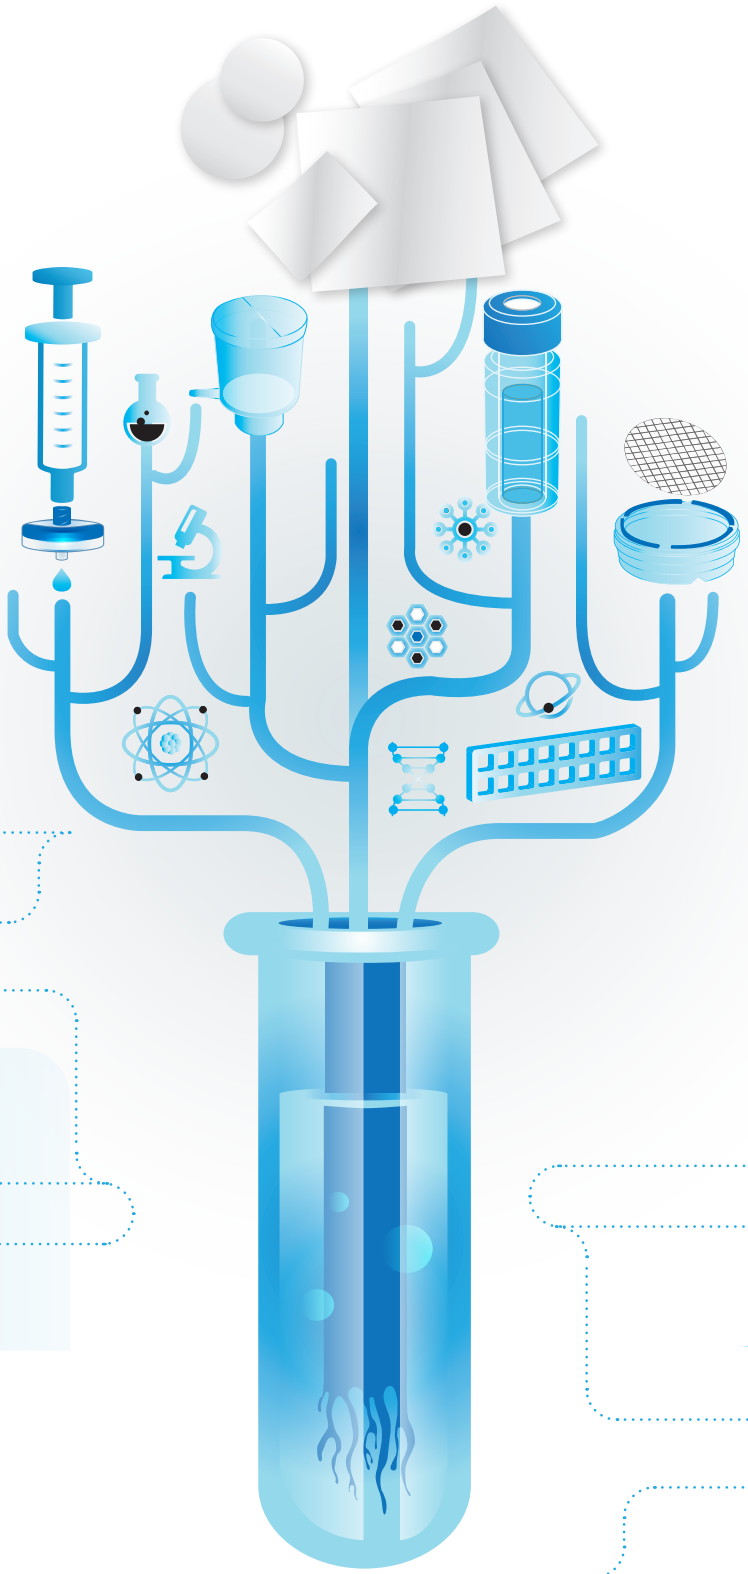
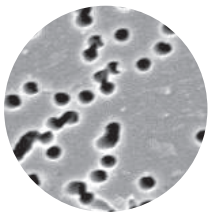
GVS

FILTER TECHNOLOGY

TRACK ETCHED HYDROPHILIC MEMBRANES



Polycarbonate Track Etched (PCTE) Membrane



GVS Filter Technology Polycarbonate Track Etched (PCTE) Membrane is made from a thin polycarbonate film with precisely defined pores. It is ideally suited for use in cellular-based filtration assays as well as filtration applications where high purity is required. The membrane is produced through a two-step, proprietary manufacturing process that employs high quality standards. In the first step, polycarbonate film is exposed to ion particles that pass through it. As the ions pass through the film, they create "tracks" where the polymer is damaged. The beamed film is then exposed to a chemical that etches out the tracks creating precise, cylindrical pores. Pore density is controlled by the number of tracks per unit area, and pore size is controlled by varying the temperature, strength and time of exposure to the etching solution. This unique process allows for increased control over pore size and density to ensure the physical properties of each membrane precisely fit your specifications. The resulting membrane is a thin, translucent polycarbonate film with a smooth, flat surface. All particles larger than the pore size are captured on its surface.

To optimize the suitability of PCTE, we offer a variety of products with unique characteristics:

- PVP (polyvinylpyrillidone)-treated for a hydrophilic membrane
- AOX-certified for applications requiring extremely low extractables
- Black-dyed membrane for staining applications
- PVP-free for a hydrophobic membrane

GVS Filter Technology PCTE Membrane is available in roll widths from 1/4 inch (0.63 cm) to 20 inches (50 cm) as well as in sheets and cut disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Features & Benefits
(of all PCTE variations)

- Absolute pore size and density allows for precise size separation
- Direct thickness and pore size measurements provide accurate characteristics
- Smooth, thin, glass-like surface is suitable for microscopy and cellular applications
- Superior strength allows for aggressive handling
- Low protein binding ensures clean results
- Resists chemical staining to ease microscopic visualization
- Passes USP VI Class toxicity testing for use in medical devices
- Low cytotoxicity offers biocompatibility

Product Characteristics (of all PCTE variations)

- Membrane thickness 5-12 µm
- Maximum operation temperature: 284°F (140°C)
- Autoclavable
- Broad sealing compatibility including ultrasonic, heat, radio frequency and insert molding

TRACK ETCHED HYDROPHILIC MEMBRANES

Polycarbonate Track Etched (PCTE) Membrane *Continued*

PCTE AOX (Hydrophilic)

GVS Filter Technology PCTE AOX-certified membrane is made from the same thin, microporous polycarbonate film that is the base for our standard PCTE products. AOX-certified membrane is further tested to provide a PCTE membrane with the level of trace volatile, chlorinated organics in the base film at or below 0.03 µg/cm (or 0.15 µg for a 25 mm membrane) by EPA method 8010. It is ideally suited for use in groundwater and wastewater testing to determine the level of organic halides.
Halide levels are often regulated and their presence is frequently used as a pollution indicator.

Features & Benefits

- AOX-certified for halide measurement using regulated tests
- Low levels of trace volatile, chlorinated organics eliminates interference with result

Typical Applications

- Groundwater testing
- Wastewater testing
- Food and dairy testing

PCTE PVP-Treated (Hydrophilic)

Typical Applications

- General filtration
- Removal of red blood cells from plasma
- Flow control of reagents through assays
- Precise filtration and prefiltration
- Fuel testing
- Cytology
- Microscopy

PCTE Black (Hydrophilic)

GVS Filter Technology PCTE Membrane is available with a black surface for staining applications. Treatment of GVS Filter Technology PCTE with a proprietary black dye makes this membrane appear dark gray. The membrane exhibits essentially no autofluorescence and is ideal for direct microscopy applications.

Typical Applications

- Epifluorescence
- Observation of microorganisms
- Direct counting of microorganisms
- Water testing

Features & Benefits

- Smooth, thin, glass-like surface ensures no microorganisms are caught within the filter structure
- Microorganisms are retained on one plane allowing for easy microscopic visualization
- Lack of staining, negligible autofluorescence and non-specific absorption ensures low backgrounds

Product Characteristics

- Hydrophilic
- Dark gray
- Similar characteristics, except for transparency, as standard PCTE membrane

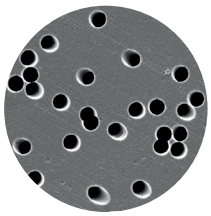
Polyester (PETE) Track Etched Membrane



GVS Life Sciences PETE Membrane is made from a thin polyester film with a high density of solvent resistance. It is ideal for use in blood assays or general filtration where chemically aggressive solvents may be used. The membrane is produced through a two-step proprietary manufacturing process similar to that of the PCTE membrane. In the first step, polyester film is exposed to ion particles that pass through the film. As the ions pass through the film, they create "tracks" where the polymer is damaged. The beamed film is then exposed to a chemical solution which etches out the tracks creating precise, cylindrical pores. Pore density is controlled by the number of tracks per unit area, and pore size is controlled by varying the temperature, strength and time of exposure to the etching solution. This unique process allows for increased control over pore size and density to ensure the physical properties of each membrane precisely fit your specifications.
The resulting membrane is a thin, translucent polyester film with a smooth, flat surface containing pores of controlled diameter and number. The membrane has better solvent resistance than polycarbonate and captures all particles larger than the precisely controlled pore size on its surface.

GVS Life Sciences PETE is available in roll widths from 1/4 inch (0.63 cm) to 20 inches (50 cm), as well as in sheets and cut disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Typical Applications

- General filtration
- Removal of red blood cells from plasma
- Flow control of reagents through assays
- Precise filtration and prefiltration
- Air analysis
- Filtration of aggressive solutions
- Cellular assays and diagnostics
- Trace element analysis

Features & Benefits

- Broad range of chemical compatibility for a wide range of applications
- Direct thickness and pore size measurements ensure accurate characteristics
- Naturally hydrophilic so pre-treatments and wetting agents are not required
- Smooth, thin, glass-like surface for microscopic visualization
- Low protein binding ensures clean results

Product Characteristics

- Membrane thickness: 10-20 µm
- Naturally hydrophilic
- Maximum operating temperature: 284°F (140°C)
- Autoclavable
- Broad sealing compatibility including ultrasonic, heat, radio frequency and insert molding

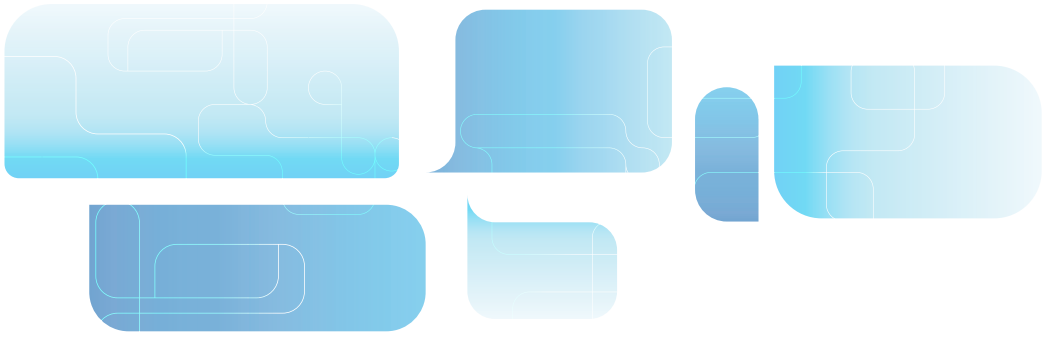
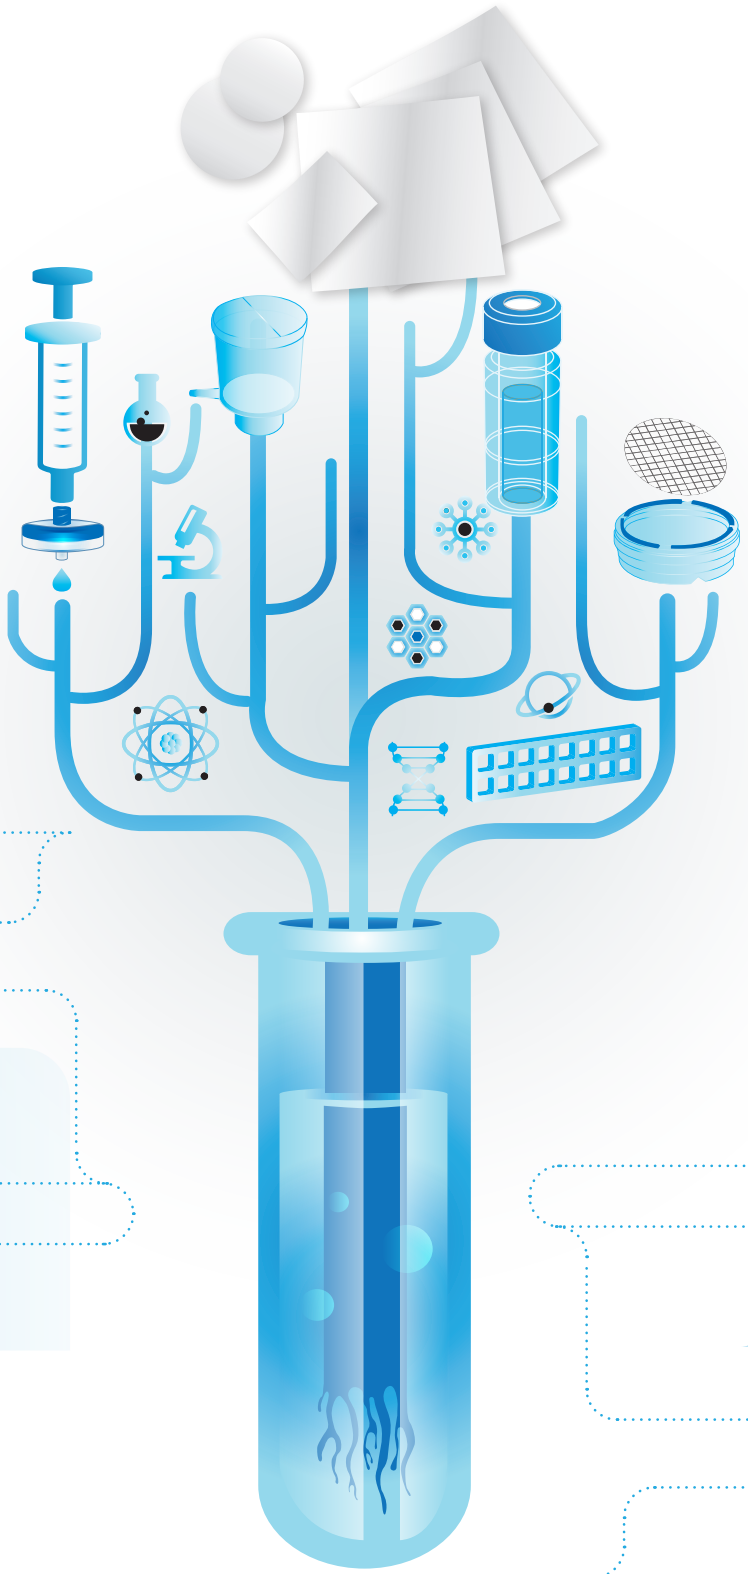
*** GVS Filter Technology Membrane is available in roll as well as in sheets and disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.



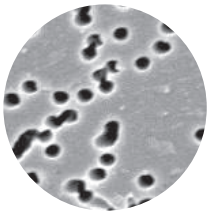
GVS

FILTER TECHNOLOGY

TRACK ETCHED HYDROPHOBIC MEMBRANES



Polycarbonate Track Etched (PCTE - PVPF) Hydrophobic Membrane



GVS Filter Technology Polycarbonate Track Etched (PCTE) Membrane is made from a thin polycarbonate film with precisely defined pores. It is ideally suited for use in cellular-based filtration assays as well as filtration applications where high purity is required. The membrane is produced through a two-step, proprietary manufacturing process that employs high quality standards. In the first step, polycarbonate film is exposed to ion particles that pass through it. As the ions pass through the film, they create "tracks" where the polymer is damaged. The beamed film is then exposed to a chemical that etches out the tracks creating precise, cylindrical pores. Pore density is controlled by the number of tracks per unit area, and pore size is controlled by varying the temperature, strength and time of exposure to the etching solution. This unique process allows for increased control over pore size and density to ensure the physical properties of each membrane precisely fit your specifications. The resulting membrane is a thin, translucent polycarbonate film with a smooth, flat surface. All particles larger than the pore size are captured on its surface.

PCTE PVP-Free (Hydrophobic)

GVS Filter Technology PCTE Membrane is also available as a hydrophobic membrane ideally suited for cellular assays, bioprocessing and diagnostics. This membrane is not treated with PVP, so it retains its natural hydrophobicity.
Other characteristics and specifications are similar to those of the PCTE membrane.

Product Characteristics

- Hydrophobic

Product Characteristics (of all PCTE variations)

- Membrane thickness 5-12 µm
- Maximum operation temperature: 284°F (140°C)
- Autoclavable
- Broad sealing compatibility including ultrasonic, heat, radio frequency and insert molding

Features & Benefits (of all PCTE variations)

- Absolute pore size and density allows for precise size separation
- Direct thickness and pore size measurements provide accurate characteristics
- Smooth, thin, glass-like surface is suitable for microscopy and cellular applications
- Superior strength allows for aggressive handling
- Low protein binding ensures clean results
- Resists chemical staining to ease microscopic visualization
- Passes USP VI Class toxicity testing for use in medical devices
- Low cytotoxicity offers biocompatibility

GVS Filter Technology PCTE Membrane is available in roll widths from 1/4 inch (0.63 cm) to 20 inches (50 cm) as well as in sheets and cut disks that can be customized to meet your application and size requirements. If different width is required we can slit following your needs.

Typical Applications

- Cellular assays
- Tissue culture
- Chemotaxis
- Diagnostics

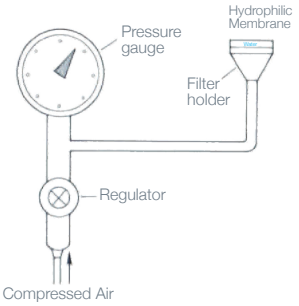
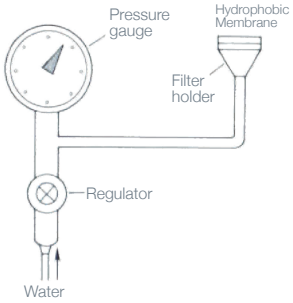
Measuring a Filter Media's Performance

GVS Filter Technology uses tests to rate the performance of its media. For any other information, feel free to contact us.

Bubble Point

Measure of the air pressure required to force liquid from the largest wetted pore of a membrane. Serves as an indication of pore size and a barrier to particulates. The bubble point is dependent on the liquid used to wet the membrane; for a given pore size the bubble point will be higher in a liquid with a higher surface tension (such as water) than in a liquid with a lower surface tension (such as isopropyl alcohol). The bubble point rating is determined when the largest pore yields a bubble; the larger the pore, the less pressure required to form the bubble. Expressed in units of pounds/square inch (psi) or bar for membranes.





Water Breaktrough

Measure of the amount of pressure required to transmit water through the largest pore of a dry hydrophobic media. Serves as an indication of pore size for a hydrophobic membrane. The larger the pore size, the less pressure required to intrude the water. Expressed in the membrane industry in units of pounds/square inch (psi) or bar.

Water Flow

Measure of the amount of water that flows through a membrane. Related to the degree of contamination, differential pressure, total porosity, and filter area. Expressed in the membrane industry in units of milliliters/minute/square centimeter at a defined pressure.

Air Flow

Measure of the amount of air that flows through a membrane. Related to the degree of contamination, differential pressure, total porosity, and filter area. Commonly expressed in the membrane industry in liters/minute/square centimeter at a given pressure.

Filter Efficiency

Measure of the quantity of particulate retained as a function of the total number and size of the challenging particles and differential pressure. Usually expressed as a percentage of retention of predetermined particle size at a given challenge concentration. In the case of bacterial removal efficiency, this may be expressed as a log reduction value.

Biological Safety Test

Tests conducted on filter construction materials that come in contact with test solutions that simulate most body fluids. Extracts of filter construction materials are tested to establish whether there are potential "leachables" present. Testing is performed to determine whether leachables are capable of inducing measurable degrees of systemic toxicity, localized skin irritation, sensitization reaction, or other biological responses.

Pirogenicity

Property of a substance that, when injected into the body, causes a rise in body temperature. Filtration materials that come in contact with injectable fluids must meet pyrogenicity standards and are therefore classified as non-pyrogenic.
